

Homemade Disinfectant Spray

DISINFECTANT BLEACH SPRAY

1 Gallon Jug

1/3 C. Bleach (regular bleach)

1/2 C. Liquid Multi-Surface/Multi-Purpose Cleaner

Water to fill the jug

Add all ingredients to the gallon jug (I saved a vinegar jug to use) and top off with water to fill the jug up. Mix well. Pour into a spray bottle. Use as desired on hard surfaces that are safe for bleaching (bathtubs, showers, toilets, countertops, etc.).

You can use bleach and water for a disinfectant spray. Add 1 C. bleach (regular bleach) to every gallon of water. Good for killing mold in moist environments.
