

Liquid Hand Soap

HAND SOAP RECIPE #1

1/4 C. Liquid Castile Soap
16 oz. Water

Pour into a hand soap dispenser with a regular or foaming pump. Swirl to combine. This soap is quite thin, so a foaming pump is preferred.

HAND SOAP RECIPE #2

6 (3 oz) Bars of Soap, shredded
11 C. Water

In a large pot, heat the water to a hot simmer/low boil, add shredded soap. Stir & allow soap shreds to completely dissolve. Once soap is dissolved, remove from heat, allowing to fully cool. Once soap is fully cooled, stir & transfer to a soap dispenser or other storage container.

Recipe #2 makes several bottles of hand soap.
